

8/11

Summary of the Programme
Indian Antenna Week (IAW 2014)

The 5th edition of Indian Antenna Week was organized by NITTTR, Chandigarh in association with Punjab Technical University, Punjab From 26-30 May, 2014 at Chandigarh, India.

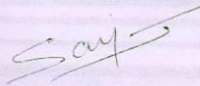

The focus of workshop was on recent advancements in antennas and antenna technologies across the globe. Large number of eminent professors from abroad and invited talks was delivered by experts of eminence. Tutorials and technical sessions by experts from industries were also delivered along with hands on practice with measuring tools by promoters. A number of quality research papers were also presented by researchers following the new trend of antennas.

I feel it has given a right platform to all the Scientists/Researchers/ Academics to get together to share thoughts, exchange views, ideas and experiments and to define a road map to cope up with the dynamically challenging situation.

I feel it was a great time for me to spend time and share my knowledge and clarifying doubts with eminent professors/ researchers during the conference period, which is not possible in general anywhere else.

I am thankful to Principal and TEQIP II for allowing me to attend this conference.

The detailed programme of work shop is attached.

Sanjeev Yadav
Assistant Professor
