

## Summary

(22)

It was an international conference on Computing, Communications, Control and automation (ICCCUBEA-2015) at Pimpri Chinchwad College of Engineering, Pune. From 26-27 Feb. 2015. I presented a research paper on "Elliptical and circular rod based band pass filter with 45 degree bend in waveguide for different dielectric rod structure using photonic crystal". I communicated with the researchers from different fields and learned about the latest research in the field of Comm. and Networking. My paper was based on optical communication which is the basic medium in today's systems because of 100% data transmission efficiency.

There were many researchers who have presented their knowledge on MATLAB, Antennas, Networking, Sensors etc. The overall experience was tremendous and I will continue my work in the same field to improve myself and share the knowledge with the students in future.
